Candelis, Inc., Announces New Reproductive Health Clinic Customer

Center for Reproductive Health and Gynecology Choose ImageGrid™ 1000 as Cost-effective Solution for Archiving Digital Ultrasound Images

IRVINE, Calif. – February 20, 2006 – Candelis, Inc., a division of Procom Technology, Inc. (PRCM.PK), today announced that the Center for Reproductive Health and Gynecology (CRH&G) of California has selected and implemented the ImageGrid™ 1000 to store, manage and route its digital ultrasound images. The ImageGrid product line features fully-integrated, Digital Imaging and Communications in Medicine (DICOM) industry-standard server appliances that speed digital image access and routing, simplify image management, and provide highly reliable, cost-effective storage.

With locations in Beverly Hills, Valencia and Burbank, Calif., CRH&G is a leading provider of advanced fertility treatments and gynecological services. The ImageGrid 1000 is currently deployed at the Beverly Hills location where digital ultrasound images are routed directly and concurrently for immediate storage and viewing by physicians at any CRH&G location. With this implementation, CRH&G has eliminated the need for printing images for archiving, while ensuring always-online access to any image. Archived images are viewed using the optional built-in, Web-based viewing software or any other DICOM standard viewing software.

“We are able to directly send our digital ultrasound images to the ImageGrid system from our GE Voluson® or Medison ultrasound systems at any of the three locations in Southern California,” said Sam Najmabadi, M.D., medical director at CRH&G. “In addition, the ImageGrid’s image routing capabilities allow us to read the images from any location, including home offices. Thanks to Candelis, our image management and archiving is now completely digital – and has been accomplished with surprising cost effectiveness.”

“The ImageGrid is a flexible digital image archiving platform ideal for clinical customers like CRH&G,” said Larry Kubo, vice president of marketing, Candelis, Inc. “With its integrated, standards-based architecture, the ImageGrid directly receives, stores and routes images from any DICOM standard digital ultrasound modality – providing physicians with immediate access to patients’ medical images. The ImageGrid also meets stringent HIPAA requirement for secured archiving of personal medical information.”

About Candelis, Inc.

Irvine, Calif.-based Candelis, Inc., is a division of Procom Technology, Inc. (PRCM.PK), a pioneer in Network Attached Storage (NAS). Candelis DICOM-based products are targeted at the growing need for data and image storage, management and routing in the medical vertical market.
