Candelis, Inc., Announces New Multiple-location Imaging Center Customer

Millennium Imaging Selects ImageGrid™ 1000 to Provide Cost-effective, Fully-integrated DICOM Standard Image Storage Solution

IRVINE, Calif. – February 20, 2006 – Candelis, Inc., a division of Procom Technology, Inc. (PRCM.PK), today announced that Millennium Imaging Medical Centers has selected and implemented the ImageGrid™ 1000 to store, manage and route its digital medical images at its locations in California. The ImageGrid product line features fully-integrated, Digital Imaging and Communications in Medicine (DICOM) industry-standard server appliances that speed digital image access and routing, simplify image management, and provide highly reliable, cost-effective storage.

With locations in Montclair and Rancho Cucamonga, Calif., Millennium Imaging is a provider of advanced multi-modality imaging services, including magnetic resonance imaging, computed tomography and ultrasound scans. By deploying the ImageGrid 1000 with 4.8-terabyte (TB) storage configuration at each location, Millennium Imaging is able to route images directly and concurrently from each modality for immediate storage, and to existing Merge eMed e-Film Workstation™. With this implementation, Millennium Imaging has eliminated the inefficient and time-consuming task of manually transferring images to CDs or DVDs for archiving, while ensuring always-online access to any image in the process.

“In a short time, the ImageGrid has become a core part of our image management workflow,” said Camiar Ohadi, M.D., medical director at Millennium Imaging. “Its embedded PACS capabilities have allowed us to avoid having to invest in more complex and costly PACS servers and hardware. With the ImageGrid system, we can focus on our patient’s needs and our operations, instead of system management, while reducing overall image archiving costs to about 50 cents per study.”

According to Dr. Ohadi, the ImageGrid system has become a central component of Millennium Imaging's disaster recovery and HIPAA compliance strategy. The system's rule-based, bi-directional replication capability ensures that images from each location are replicated daily at times and frequencies determined by the system administrator.

"The ImageGrid's ability to directly receive, store and route images from any DICOM standard modality has been the key to its success with customers," said Larry Kubo, vice president of marketing, Candelis, Inc. "In addition to the ImageGrid's versatility and cost-effectiveness, Millennium Imaging and other customers are finding the solution's integrated and standards-based architecture extremely attractive."

With an annual capacity for more than 4,000 studies at an average size of 100 megabytes each, the 4.8 TB ImageGrid 1000 provides Millennium Imaging with more than six years of always-online archiving capability. As Millennium Imaging's archiving needs grow, the ImageGrid will continue to provide cost-effective image storage solution thanks to an optional expansion capability to 38 TB.

About Candelis, Inc.

Irvine, Calif.-based Candelis, Inc., is a division of Procom Technology, Inc. (PRCM.PK), a pioneer in Network Attached Storage (NAS). Candelis DICOM-based products are targeted at the growing need for data and image storage, management and routing in the medical vertical market.
