**Candelis Completes Its Mammography Offering
with the ImageGrid™ Mammography Tracking Module**

***Optional ImageGrid RIS Feature Optimizes Mammography Workflow;
Tracks Exam and Pathology Results, and Follow-ups via Automated Letters***

CHICAGO – December 1, 2008 – Candelis, Inc, an Irvine Calif.-based medical informatics company, today announced the **ImageGrid™ Mammography Tracking Module**, an optional feature to the ImageGrid RIS. Designed to improve workflow for facilities providing mammography services, the ImageGrid Mammography Tracking Module provides the ability to store exam and pathology results, perform follow-up query using automated letters, and conduct statistical reporting of follow-ups and recommendations.

The ImageGrid Mammography Tracking Module completes Candelis' mammography offering which includes the **ImageGrid RIS/PACS appliance**, the most cost-effective, feature-rich and comprehensive medical image management and workflow solution available in the market; and the **ImageGrid Mammography Web-enabled Viewer** that allows physicians to view breast MRI and ultrasound studies from any workstation on a Local Area Network (LAN), Wide Area Network (WAN) or remote workstations via a Virtual Private Network (VPN) connection.

“The introduction of the ImageGrid Mammography Tracking Module not only complements Candelis' mammography-specific solutions, but also provides the necessary component to make Candelis an all-around mammography informatics provider,” said Hossein Pourmand, vice president of business development, Candelis, Inc. “The mammography module enables storage of important exam data, such as reason for mammogram, overall assessment, and follow-up recommendations; pathology data for positive mammograms leading to a biopsy; as well as follow-up query and statistical analysis.”
