

ImageGrid™ RIS Feature List:

- Complete workflow-driven RIS system which captures every process from patient registration to final report delivery via fax and other communications
- Feature-rich, easy to use order-based scheduling allowing multiple procedures to be scheduled simultaneously in multiple facilities. Powerful color-coded user interface (customizable) and flexible visit/appointment creation.
- Fast, intuitive workflow-driven patient registration and order entry.
- Comprehensive and detailed patient chart, capturing all demographics information and a patient history chart under one form.
- Quick and straightforward document scanner and import tool, enabling fast storage of important patient and order documents.
- Built-in template-based reporting system with single-click X.509 Digital Certificate signing, printing, faxing, and exporting (to PDF) capabilities.
- Powerful radiologist workflow including integration with ImageGrid Radiology Viewer, built-in dictation, and fast report viewing.
- Compatible with transcription pedal and dictaphone, which integrates with transcription and radiology workflow.
- Powerful system administrator user interface allowing customization of all aspects from procedure creation, facility creation, staff roles, pre-configured data, admin reports, resources, staff, validation, etc.
- Application customizations based on user's role
- Powerful authorization feature, capturing every field in every form with visibility and editable options, as well as action-enabled customization for every aspect of the system.
- Color-coded validation of forms and fields, easily customizable by the administrator.
- Easy-to-use powerful mammography module added to the RIS, which includes mammography tracking as well as a follow-up letter workflow and tracking.
- Easy to manage modularization of the system, so that the each user can select relevant modules.
- Easy to use patient film tracking capability.
- Modality Worklist (MWL) and MPPS services.
- Integrated with MedCurrent (online insurance verification tool) to provide real-time insurance eligibility information.
- HL7 Support for integration with other EMR or HIS.

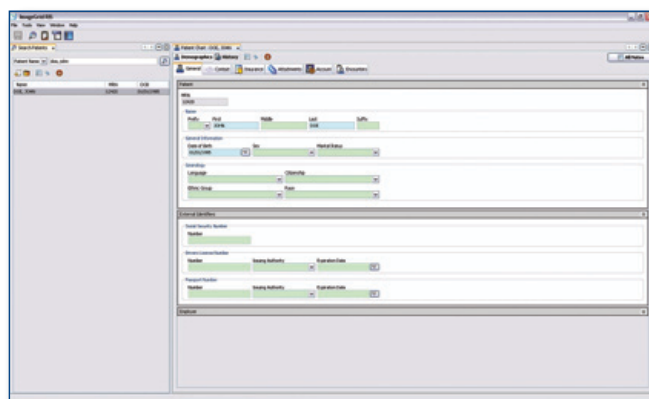

ImageGrid™ RIS

Optimizing Radiology Workflow

Candelis has expanded the capabilities of its ImageGrid™ PACS Appliance with the addition of a cost-effective, feature-rich and fully integrated **ImageGrid™ RIS** (IG-RIS). IG-RIS is designed to streamline and improve the workflow of a radiology environment. As a web-enabled application residing on the ImageGrid PACS appliance, the RIS module allows radiologists, technologists and staff to better manage and access patient data and information from a single platform. ImageGrid RIS can be accessed from any workstation on a Local Area Network, Wide Area Network or remote workstations via a Virtual Private Network connection.

Color coded scheduler showing multiple resources and appointments

Efficient capture of patient demographic information.

ImageGrid™ RIS

Mammography Tracking Module

For facilities providing Mammography services, an optional Mammography Tracking Module provides the ability to capture specific workflow issues and requirements of Mammography. The ImageGrid Mammography Tracking Module features include:

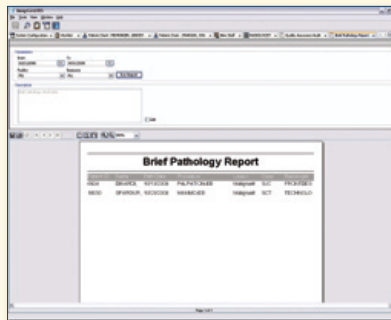

- Exam Results
 - Stores exam date, reason for mammogram, overall assessment, follow-up recommendations, and reading radiologist
- Pathology Results
 - Stores pathology data for positive mammograms that lead to biopsy
- Follow-Up
 - A query interface that shows a list of patients due for a certain period of time
 - Auto-create results letters and follow-up letters based on follow-up recommendations
- Statistical Reports (audit)
 - Follow-up analysis by number of patients and follow-up recommendation
 - Quality assurance audit
